

## **Technology Meet 2022**

During 2021-22, various technology providers have approached ONGC offering their innovative technologies in the field of E & P operations. Therefore need has been felt to explore the applicability and adoption of these technologies in E & P operations. Various technologies are being increasingly used in E&P landscape like Industrial Internet of Things (IoT), Big Data, Block Chain, Virtual Reality, Augmented Reality, Robotic Process Automation, Artificial Intelligence, Cognitive computing etc.

ONGC has also taken necessary steps to induct disruptive technology to take early advantage. Director (Onshore) has also advised to review & evaluate such technologies focusing on production enhancement, increased efficiency, safety in operations, etc.

Further, a technology adoption roadmap is to be prepared to implement selected technologies in a time bound manner. With the above context in mind, Technology Meet-2022 is being held to showcase Technologies in the domain of Engineering Projects i.e. Conceptualization to commissioning of a project and subsequent maintenance of the created facility in a unified Digital Environment. In the meet various digital technologies being implemented as a pilot will also be appraised to the participants. Further, the possibility of scale up will also be showcased by respective technology solution provider.

Technology Meet-2022 will provide a common platform for interactive sessions, consultations, deliberations for better understanding and confluence on action on various technological aspects which will be relevant for operation and maintenance of the Surface Facilities/Pipelines.
